Professional Experience

Senior Data Scientist **August 2025 – Present**
VideoAmp (AdTech) *Remote (Seattle, WA)*

- Develop and evaluate Double Machine Learning models to measure advertising incrementality across linear and digital TV, supporting more rigorous causal measurement of campaign effectiveness
- Identified a critical modeling bug through a rapid-response investigation, reducing incrementality measurement error 5x before product release
- Researched and developed new features, identifying additional confounders to improve model rigor
- Presented a revised incrementality methodology to the methodology review board
- Led cross-functional data science projects from requirements through delivery, aligning stakeholders and driving on-time execution
- Built a Claude skill to automate methodology requirement document drafting for the Data Science team, reducing drafting time by 4x

Machine Learning Engineer **May 2022 – September 2024**
VideoAmp (AdTech) *Remote (Philadelphia, PA)*

- Built ad spend optimization tool to maximize campaign reach given impression constraints on streamers
- Calculated reach and frequency for ad campaigns, processing hundreds of millions of impressions across streaming platforms
- Led production deployment of an overnight TV airings model that helped secure a major client contract, contributing to multi-million-dollar returns alongside other initiatives
- Deployed predictive models through Snowflake stored procedures and Databricks integrating with Snowflake model registry and feature store
- Maintained repository-wide code coverage above 88% through automated testing and pre-commit linting
- Converted experimental Jupyter Notebooks to production ML pipelines using Airflow to execute Python scripts on Databricks ephemeral clusters
- Communicated technical details in a cross-functional team of project managers, data scientists, and engineers

Mathematics Researcher (NLP & Wildfire Groups) **October 2020 – August 2021**
Brigham Young University *Provo, UT*

- Created dataset of millions of English sentences by web scraping with BeautifulSoup and Selenium
- Optimized the Transformer NLP model by adjusting various hyperparameters across training instances
- Approximated final spread of wildfire using image segmentation to identify perimeter in satellite images
- Predicted wildfire spread by simulating spread on a numerical representation of the environment

Education

MS, Applied & Computational Mathematics **September 2024 – June 2025**
University of Washington *Seattle, Washington*

BS, Applied & Computational Mathematics **August 2016 – April 2022**
Brigham Young University *Provo, Utah*

Volunteer Experience

Full-Time Volunteer Representative **September 2017 – August 2019**
The Church of Jesus Christ of Latter-day Saints *Cape Coast, Ghana*

Skills

Programming: Python, SQL, Git, Unix, Claude Code

Models & Metrics:

Expert: Random Forest, XGBoost, Logistic Regression, Confusion Matrix Metrics, Precision, Recall, A/B Testing, Causal Inference, Optimization,
Familiar: Deep Learning, CNNs (ResNet), Image Segmentation (U-Net), Transformers (Attention)

ML Libraries: Scikit-learn, PyTorch, TensorFlow, MLflow, Spark, Snowpark, Pandas, SciPy, NumPy

Data & Infra: Snowflake, Databricks, Airflow, Astronomer, Postgres
